Notes: Python while loops
A while loop repeats its body as long as its condition is True.
Syntax: while condition: followed by an indented body.
The condition is checked before every round, including the first one.
Always change something inside the loop so the condition can become False.
Example: a batsman needs 50 runs. Keep adding runs until the total reaches 50.
break exits the loop at once. continue skips to the next round.
Common mistake: forgetting to update the counter gives an infinite loop.
Use for when you know how many rounds; use while when you stop on a condition.
